## Hinged-Cover Wiring Duct

Hinging cover remains attached during routine maintenance or system upgrades, providing easier channel access and preventing cover loss.

- No need to completely remove cover – simple wiring changes can be up to 20% faster
- Cover can hinge open up to 100° from either sidewall of duct base
- Cover retention in vertical applications is up to two times greater than conventional wiring ducts
- Cover fully engages duct fingers, limiting sidewall flex
- For use in electrical control panel and low-voltage communications applications
- UL® Recognized and CSA Certified
- Continuous use temperature of 122°F (50°C)

# Identification and Safety

Panduit solar labels are designed to meet required safety standards for PV installation labeling. These labels are available in a variety of sizes and styles. Certain labels leave blank spaces where variable thermal transfer printing can be added when specific on-site power and series data is required. These labels are ready to print on-demand using Easy-Mark™ Labeling Software and a TDP43ME Thermal Transfer Desktop Printer. All labels are outdoor rated and are designed to have high resistance to direct UV exposure. This product solution has an optional clear over laminate to function in harsh environments.

- Expertise in workplace safety compliance; meeting requirements of stringent regulatory bodies (OSHA, ANSI and NFPA)
- Complete safety solution; to control and identify energy in a workplace with lockout/tagout devices, facility signage and labeling systems
- Polyester material ensures outdoor durability of five years

**NEC 690.13(B):** Each photovoltaic system disconnect means shall be permanently marked to identify it as a photovoltaic system disconnect.

**NEC 690.15:** If the equipment is energized from more than one source, the disconnecting means shall be grouped and identified.

**NEC 690.17(E):** Where all terminals of the disconnecting means may be energized in the open position, a warning sign shall be mounted on or adjacent to the disconnecting means.

**NEC 690.31(G):** PV power circuit labels shall appear on every section of the wiring system that is separated by enclosures, walls, partitions, ceilings, or floors. Spacing between labels or markings, or between a label and a marking, shall not be more than 3m (10 ft).

**NEC 690.33(E)(2):** Interruption of Circuit. Connectors shall be a type that requires the use of a tool to open and marked "Do Not Disconnect Under Load".

**NEC 690.35(F):** The PV power source shall be labeled at each junction box, combiner box, disconnect, and device where energized, ungrounded circuits may be exposed during service.

**NEC 690.51:** Modules shall be marked with identification of terminals or leads as to polarity, maximum overcurrent device rating for module protection, and with the appropriate ratings.

**NEC 690.52:** Alternating-current modules shall be marked with the information seen on the label.
